

Mohammed Touati

Design Engineer & Frontend Developer

Cairo, Egypt | +20 1017172564 | touatimed93@gmail.com | medtouati.com
linkedin.com/in/mohammed-touati | github.com/MedLines

Design engineer and frontend developer with a background in graphic and web design. I design products and websites from concept through interaction design, and build their interfaces with React and Next.js. Creator of Keepall, an open-source reference library and Chrome extension.

Apps

Keepall	keepall.app GitHub
Product design & technical direction	2026

- Conceived, designed, and shipped a library for links, notes, images, videos, and files, with collections and a Chrome extension for capturing references while browsing.
- Chose IndexedDB storage so people can start without an account, with explicit backup and transfer. Kept link enrichment on the server where browser cross-origin restrictions prevent direct fetching.
- Refined mixed-media previews with stable layouts, Space and arrow-key navigation, and view transitions so users can browse a collection without repeatedly closing and reopening items.

AI-Media Workbench	GitHub
Product concept & interface design	2026

- Conceived and designed a three-panel workspace for playback, transcripts, and questions. Answers link to source timestamps so users can check the recording while reading.
- Included a seeded demo so the interface can be explored without API keys or transcription setup.

Websites & landing pages

Keepall website	keepall.app/about GitHub
Designed the landing page and its interactions, including tactile icons, a scroll transition into the library preview, and an elastic footer, with keyboard controls and reduced-motion handling.	

Symbios	symbios-au.vercel.app
Designed and developed a Next.js website for an Australian sales and support team, with an animated SVG service illustration, staged reveals, and reduced-motion handling.	

Kynto Live | GitHub Designed in Figma and developed in Next.js for an HR platform, with a dashboard preview and card interactions.

Arken Live | GitHub Designed and developed an architecture website with a responsive photography grid, optimized images, and consistent section transitions.

Experience

Freelance Frontend Developer	Remote	Oct 2025 – Present
Design websites and application interfaces in Figma and develop them with React and Next.js, including Symbios. Implement application state and UI behavior using Server Actions and custom hooks.		

Freelance Graphic/Web Designer	Remote	Jan 2018 – Oct 2025
Created brand systems, infographics, data visualizations, and web interfaces. Prepared Figma prototypes, asset kits, and documentation for developer handoffs.		

Core skills

Frontend: React, Next.js, TypeScript, JavaScript, HTML, CSS, Tailwind CSS
Design & interaction: Figma, Motion, responsive layouts, keyboard interaction, Adobe Illustrator, Photoshop
Development workflow: Git, GitHub, Vercel; implementation review and testing

Education

Master of Mechanical Engineering (Power)	Jul 2017
Bachelor of Mechanical Engineering (Power)	Jul 2015
Amar Telidji University, Laghouat, Algeria	

Languages: Arabic, native; English, professional; French, intermediate.
